12. New_student.php

13. short_term_objectives.php

14. strength_need_view.php

15. transition_plan.php

System Integrity, Security, Quality Control

1. Investigate password encryption

   - salt+md5

2. Force change password

   - redirect if flag is set
   - unset flag on password reset

3. Refactor (use Eclipse)

   - Revise Standards
   - Rename functions
   - Rename files
   - Rename variables
   - Create functions for repeated procedures/code blocks (e.g. validation, permission check

4. Error traceback test; log errors with content

5. Complete logout: complete cleanup of session (timeout)

HTML5

1. Validation

2. Form input validation

3. Form autofocus

4. Required fields

Bug Fixes

Accomodations, Etc

1. Return functionality

   - Delete an entry
   - Mark entry complete, incomplete
